# 1. Introduction

The Space Exploration Society (UKET) is an association established by young space professionals who come together with the goals of contributing to space studies, carrying out practical training activities in this field, and being the planners and stakeholders of extraterrestrial exploration activities. The main goal of the association is to create opportunities that will unite the scientists, technocrats, students, and enthusiasts working in the space industry. Anatolian Junior rover Challenge Junior (ARC Jr.) is organized by the Space Exploration Society (UKET).

The Anatolian Junior rover Challenge Junior (ARC Jr.) is a competition for junior rovers open to participants of any nationality and age. Participants will send their application for their junior rover on the website to qualify. Finalist junior rovers will be chosen based on readiness and announced before the event. Junior rovers will complete various tasks during the finals, held on a challenge field created to simulate space exploration and investigation scenarios. Judges will score according to the ARC Jr. Manual, and prizes will be given according to the scoring. The ARC Jr. event provides an opportunity for individuals and teams to showcase their ability

to solve complex engineering and scientific problems by designing, manufacturing, and equipping their vehicles.

# 2. General Information and Rules

Anatolian Junior rover Challenge Junior (ARC Jr.) 2025 will be held on 23-27 July 2025. The challenge is organized by the ARC Jr. Organizing Committee, which is a subcommittee of the Space Exploration Society (UKET) that was established to contribute to space studies in Türkiye.

# 2.1. Participation Conditions

- 1. Applications **must be submitted electronically** through the online application system on Apply ARC Jr I Anatolian Junior rover Challenge Junior.
- 2. Any changes to application information **must be** reported to the ARC Jr. Organizing Committee.
- 3. No age, nationality, or profession limitation exists on ARC Jr. competitions.
- 4. ARC Jr. competition welcomes participation both from **individuals** and **teams**.
  - a. A participant may compete either as an individual or as a member of one team only. Participants are not allowed to represent more than one junior rover.
- 5. All underage participants **must deliver a signed consent** form from their legal guardian on the registration and orientation day. Otherwise, they **will not be permitted** to participate in the competition. Underage participants must be accompanied by an advisor with a higher educational background of legal age (21 or older) in the challenge field.

# 2.2. Application

An application must include the following:

- 1. A single video of junior rover consists of the following:
  - a. Introduction of junior rover, robotic arm design and its capabilities, sub-walk system design, wheel design, etc.
  - b. Illustration of the competition readiness, problem-solving approach to the tasks given on different challenges, the strategies planned for different challenges, etc.
  - c. Status of the manufacturing, problems faced, foreseen solutions to those problems, etc.
  - d. The video will be uploaded **online via YouTube**. The link to the video will be submitted to the application form. Make sure the video content is **publicly accessible**.
  - e. The video length must be between 2-3 minutes.
- 2. Photos taken from 5 different perspectives of junior rover.
  - a. 1 isometric photo,
  - b. 1 front-side photo,
  - c. 1 right-side photo,
  - d. 2 free-angle photographs
- 3. A photo of the participants/team **alongside** junior rover.
- 4. Design & Cost Report
  - a. A design report must detail your team's junior rover design. It should include a brief history of your team and provide a comprehensive overview of junior rover design, covering all subsystems—mobility, electronics and power, manipulation, science payload, and ground station. Each subsystem should be described in terms of its

purpose, technical specifications, unique aspects, and adequacy for the competition missions. Visuals such as photos, diagrams, and 3D models must accompany the text to illustrate the systems. Teams are expected to provide thoughtful **insights** into their design choices, including their strengths, weaknesses, and inspirations. This report will serve as a crucial component in evaluating your team's readiness and innovative approach.

- b. A cost report for junior rover must be prepared, ensuring that the total expenses do not exceed USD 1,000. All information provided in the report must be supported by official documents and may be subject to verification on the challenge day. Submission of the financial report is mandatory for eligibility to participate in the final stage of the competition.
- c. The cost & design report templates are shared on ARC Jr. website.

## 2.3. Finalists

The finalist teams will be selected by the judges based on **competition readiness** presented in the reports, photos, and videos submitted by the teams. The finalists will be announced on the date specified in the calendar.

# 2.4. Junior Rover Design Requirements

- 1. A **Junior rover** is a small unmanned ground vehicle that is remotely controlled or autonomous. Wireless communication, including sound or radio waves, is allowed to control junior rover, with the team member standing within a few meters of junior rover and **maintaining visual contact** or using the **onboard camera**.
- 2. Junior rovers **must be designed** to withstand local weather and terrain conditions, including gravel, loose or hardened soil, and fine particle sand. The Organizing Committee is **not responsible** for any damage to hardware or software during the challenge.
- 3. The challenge will take place on a simulated lunar surface with loose soil and potentially cratered or sloped sections, approximately 9 meters radius circle, including a Moon base with 4 meters in diameter and a 1.5m rectangular Lunar greenhouse.
- 4. The ARC Jr. Organizing Committee **reserves** the right to change soil particle size and type. It is recommended that rovers be designed to perform the missions given in ground conditions such as gravel, either loose or hardened soil, and fine particle sand.
- The missions of the challenges are designed for rovers with maximum dimensions of 40cm x 40cm x 40cm. For instance, both airlocks of the moon base and the green house are a restriction for designs with a 40cm x 40cm rectangular cross-section entrance.
- 6. No weight limitations apply.
- 7. The total cost of junior rover systems cannot exceed USD 1,000. Check the Application section for the details.
- 8. Each rover will be given a **restart option**, when decided, junior rover will be carried to the starting point and the timer will be **reset**. In case of use, the scores gained from the prior run will be **ignored**, and only the second run points will be **taken into account**. The restart option can be used on **each challenge once**.

# 2.5. Organization Rules

- 1. All junior rover participants present in the on-site challenge will be given a certificate of participation.
- 2. The scores from all three missions will be combined to create **a single ranking**, and rewards will be given on this **cumulative ranking**.
- 3. The Timetable showing the fielding time of junior rover will be announced by the ARC Jr. Organizing Committee on the website after **online check-in.** The timetable may be subject to change at the discretion of the Organizing Committee.
- 4. Participants must **adhere** to the changes regarding the rules, calendar, or timetable published on the website.
- 5. Participants must **obey** the set timetable. Junior rover must take the field with a **maximum delay of** 5 minutes from the appointed time, otherwise, junior rover is disqualified from that day's competition. Time limitations and timetable are **not** a matter of debate.
- 6. Watching the mission fields while other junior rovers are competing **will not be allowed**.
- 7. During the entire event, no rover damage or interfere with other teams' systems. Any reports of such violations will be investigated independently by the judges or organizers, and any violation of this rule may result in the team's disqualification from the challenge. The ARC Jr. Organizing Committee will not be held responsible for any of the damage caused to teams' systems.
- 8. Causing any **damage** to the placed items or structures on the field **deducts 10%** of the mission score.
- Participants are allowed to manipulate or touch junior rover only within the moon base. Touching or manipulating junior rover outside the moon base during the challenge is strictly prohibited. Any violation of this rule will result in a 30% deduction from the challenge score.

## 2.6. Questions and Answers

A frequently updated Questions and Answers section is provided on the website. Teams are encouraged to ask questions through this section. The **FAQ** and **Q&A** sections override the ARC Jr. Manual.

## 2.7. Ethics

- 1. Any kind of **inappropriate behavior** will be noted by The Organizing Committee and related authorities will also be informed immediately if necessary. These behaviors can be summarized as follows;
  - 1.1. **Insulting, swearing, threatening**, etc. actions against other participants, people, or organizations **through social media or in the challenge area** during the challenge period.
  - 1.2. **Provocation**, disturbing other participants, being involved in fights, etc.
- 2. Language, religion, belief, political opinion, race, age, and gender discrimination will not be tolerated in the **challenge area**, as well as behaviors and practices that **may jeopardize equal opportunity**.

# 2.8. Calendar

An up-to-date calendar of the challenge and important dates are shown in the table below. The ARC Jr. Committee reserves the right to change the calendar.

| Date       | Event                                   |
|------------|---|
| 22.12.2024 | ARC Jr'25 Manual V1                     |
| 25.01.2025 | ARC Jr'25 Manual V2                     |
| 25.02.2025 | ARC Jr'25 Manual V3                     |
| 25.02.2025 | Start of ARC Jr'25 Applications         |
| 20.06.2025 | Last Day for ARC Jr'25 Applications     |
| 01.07.2025 | Announcement of Finalists               |
| 02.07.2025 | Online Check-in Start                   |
| 20.07.2025 | Online Check-in Deadline                |
| 23.07.2025 | Timetable Announcement                  |
| 23.07.2025 | Challenge Registrations and Orientation |
| 24.07.2025 | Lunar Cultivation Mission               |
| 25.07.2025 | Autonomous Pathfinding Mission          |
| 26.07.2025 | Lunar Drilling Mission                  |
| 27.07.2025 | Awards Ceremony                         |

 $\mathbf{x}$ 

# 3. Missions

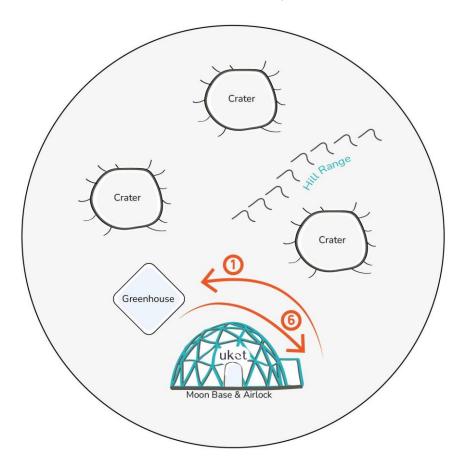

## 3.1. Lunar Cultivation Mission

Time Limit: 10+10+10 minutes

**Purpose**: Junior rover must collect various measurements and strawberry samples from the lunar greenhouse and deliver them safely to the scientific team. **Scenario**: The journey toward sustainable space exploration begins with groundbreaking advancements in extraterrestrial agriculture. Scientists have successfully engineered a resilient strawberry DNA variant capable of thriving in the harsh conditions of space. To test its potential, a lunar greenhouse was established, simulating farming conditions on the Moon. Within this controlled environment, explorers collect strawberry samples, analyze critical parameters such as size, color, and structural integrity, and deliver them to the lunar base for detailed scientific study. This mission not only advances agricultural science but also lays the foundation for cultivating crops in space, a critical step in supporting longterm human habitation beyond Earth and ensuring the viability of extraterrestrial ecosystems.

## 3.1.1. Challenge Map

The Lunar Cultivation Mission map is shown below.

## 3.1.2. Phases

This mission consists of three phases.

#### 3.1.2.1. Fieldwork

Time Limit: 10 minutes

- 1. Junior rover proceeds from the **starting point** to the lunar greenhouse and **reaches/enters** the lunar greenhouse.
- 2. Junior rover conducts research inside the lunar greenhouse. During this research:
  - a. Sensor measurements are collected from the lunar greenhouse.
  - b. Photos of the lunar greenhouse and strawberries are taken.
  - c. Junior rover **collects** a strawberry sample.
- 3. Junior rover returns to the base and **delivers** the collected samples to the astronaut scientists.

Note: The restart option for this mission only applies for fieldwork.

#### 3.1.2.2. Experiments

Time Limit: 10 minutes

- 4. Astronaut scientists conduct their experiments.
  - a. Teams will be provided with kits required to **isolate DNA** from strawberries.
  - b. Teams are also expected to research and apply **their own** experiments.
  - c. The materials needed for the experiments to be conducted must be procured by the teams **themselves**.
  - d. Teams may contact ARC Jr. Committee via email for support regarding their planned experiments.

#### 3.1.2.3. Presentation

Time Limit: 10 minutes

- 5. Astronaut scientists perform their presentation;
  - a. The **captured photos** should be explained, highlighting **key observations** and details.
  - b. The outcomes **measured by** various sensors should be discussed, supported by the provided data and analysis.
  - c. The experiment results and steps taken during the **experimentation process** should be presented.
  - d. Support your presentation by researching **mission-related articles**, such as agriculture in space.

## 3.1.3. Score Table

| No  | Parameter  | Detailed Explanation   | Score                                |
|-----|--|--|--------------------------------------|
| 1   | Reach to lunar greenhouse                                    | Junior rover reaches to the lunar<br>greenhouse  | 15                                   |
| 2.a | Conduct the measurements                                     | Junior rover conducts the measurements<br>inside the lunar greenhouse  | 10/unique sensor<br>reading (max 50) |
| 2.b | Take photos of the<br>strawberry and the lunar<br>greenhouse | Junior rover photographs the lunar<br>greenhouse and strawberries collected  | 10                                   |
| 2.c | Collect a strawberry sample                                  | Junior rover collects a strawberry sample  | 25                                   |
| 3   | Deliver the samples to the base                              | Junior rover safely delivers the samples to<br>the base  | 20                                   |
| 4.a | Complete the experiments                                     | Astronaut scientists conduct the DNA isolation experiment.   | 10                                   |
| 4.b |  | Astronaut scientists conduct the experiments determined by the teams.  | 10                                   |
| 5.a | Complete the presentation                                    | Discussion of the captured photos  | 5                                    |
| 5.b |  | Discussion of the measurements   | 10                                   |
| 5.c |  | Discussion of the experimental findings  | 10                                   |
| 5.d |  | Discussion of the mission-related articles.  | 15                                   |
| 6   | Design Bonus   | Extra points will be given to rovers<br>designed according to the task and have<br>performed innovative solutions to the<br>problems faced during the mission. | 20                                   |
|     |  | 200  |                                      |

1

# 3.2. Autonomous Pathfinding Mission

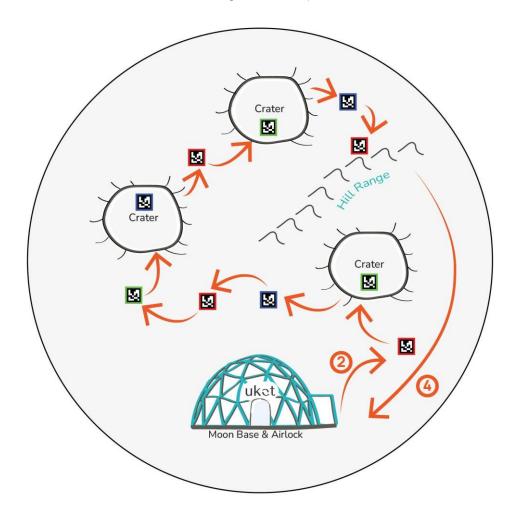

#### Time Limit: 15 minutes

**Purpose:** The mission aims to demonstrate precise autonomous navigation and identification of key locations using visual markers, essential for future lunar exploration and resource mapping.

**Scenario**: To further expand the potential for lunar agriculture, identifying optimal farming locations across the Moon's vast surface is essential. Scattered across the terrain are 10 key sites, each marked by unique beacons, representing promising zones for soil analysis. Explorers navigate these beacons autonomously, following a precise sequence to ensure efficient scouting and data collection. These sites are believed to harbor nutrient-rich regolith and water reserves, essential resources for establishing future lunar greenhouses. This mission highlights the critical role of autonomous navigation and mapping technologies in exploring challenging terrains, advancing the search for sustainable agricultural zones, and unlocking the Moon's potential as a self-sustaining environment.

#### 3.2.1. Challenge Map

The Autonomous Pathfinding Mission map is shown below.

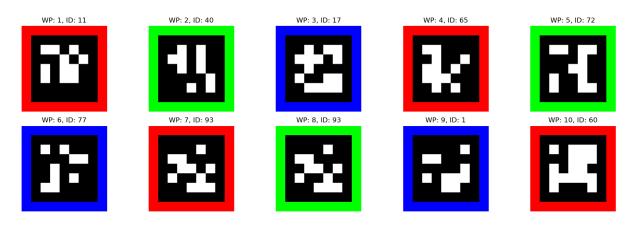

- 1. Junior rover begins at the Moon Base and manually exits the lunar base to start **autonomous pathfinding** (autonomy is not required for this step).
- 2. Junior rover must have a functioning **indicator light** that shows the vehicle control mode during the challenge. The indicator light **must** work throughout the entire task, and its proper functionality is crucial. The indicator light colors must be;
  - a. **Red:** Autonomous mode.
  - b. Yellow: Detection mode.
  - c. Green: Manual mode.
- 3. Junior rover will **autonomously** navigate through the given 10 **GPS locations** on the map and detect ArUco Tags. The **colored-sequenced rectangles** around the ArUco Tags will serve as **auxiliary information** to enhance detection and navigation. For further details, refer to the specifications of ArUco Tags.
  - a. Junior rover must reach within a **50 cm perimeter** of each waypoint for it to count as reached.
  - b. Upon reaching a waypoint:
    - i. Junior rover **stops**, and the indicator light changes to **yellow** during the identification process.
    - ii. Junior rover displays the detected **ArUco index** on its display screen, visible by the referees.
  - c. Reaching and completing **the last waypoint** awards extra points to encourage full mission execution.
- 4. After visiting all waypoints, junior rover autonomously traverses back to the moon base.
  - a. **Extra points** are awarded to rovers that follow their **traversed path in reverse** during the return journey.

#### 3.2.3. ArUco Tags

- 1. The ArUco Tags will be taken from the **5x5\_100** predefined dictionary.
- 2. Each waypoint will be tagged with a **unique** ArUco tag.
- 3. Each ArUco tag will be in a **colored rectangle** of red, blue, green sequence.
- 4. Each ArUco tag will be printed on cardboard with dimensions of **20x20cm**. And the height of the center of the arUco tag will be around **50 cm**.
- 5. An **example** waypoint/arUco sequence is shown below.

## 3.2.4. Score Table

| No  | Parameter                             | Detailed Explanation  | Score        |
|-----|---------------------------------------|---|--------------|
| 1   | Exit the Moon Base                    | Junior rover navigates to the designated autonomous starting point  | 5            |
| 2   | Indicator Light Penalty               | If the indicator light is not turned on during the mission, junior rover incurs a 10% penalty for the mission.  | -10%         |
| 3.a | Traverse through the given waypoints. | Junior rover successfully reaches within a 50 cm radius of each waypoint on the field   | 5 / waypoint |
| 3.b |                                       | Junior rover successfully identifies the ARTag<br>at each waypoint, the indicator light turns<br>yellow and the ARTag index is displayed,<br>visible by the referees. | 5 / waypoint |
| 3.c |                                       | Reaching the last waypoint awards additional points.  | 25           |
| 4   | Return Journey to Moon<br>Base        | Junior rover successfully returns to the Moon<br>Base autonomously.   | 25           |
|     |                                       | Junior rover follows the same path in reverse during the return journey.  | 15           |
| 5   | Save waypoint<br>information          | Junior rover saves waypoint / ArUco Tags<br>sequence to local memory. Astronaut<br>scientists hand the SD card to the referees at<br>the end of the mission.          | 10           |
| 6   | Design Bonus                          | Extra points will be given to rovers designed<br>according to the task and have performed<br>innovative solutions to the problems faced<br>during the mission.        | 20           |
|     |                                       | 200   |              |

ς.

# 3.3. Lunar Drilling Mission

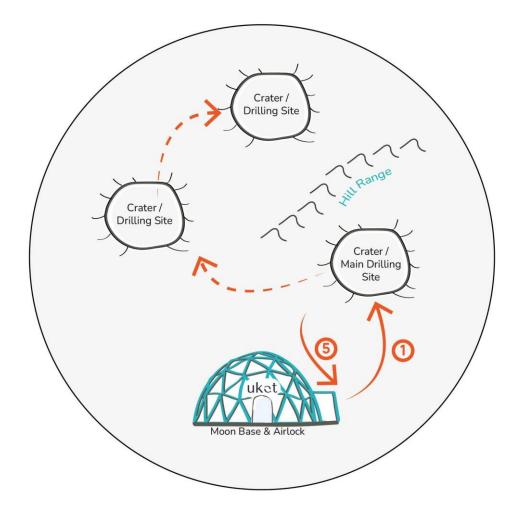

#### Time Limit: 20 minutes

**Purpose:** To collect scientific data on the sustainability and potential of lunar agriculture, particularly focusing on identifying water sources essential for sustaining agricultural activities.

**Scenario**: Once promising agricultural sites are identified, the focus shifts to a detailed examination of the Moon's subsurface. Advanced drilling mechanisms are deployed to excavate the lunar soil, uncovering layers that may contain nutrients or water deposits critical for farming. During these excavations, explorers capture high-resolution imagery and collect soil samples for analysis, seeking to understand the potential of these resources to support agriculture. By integrating insights from drilling with data from the lunar greenhouse and navigation missions, this effort marks a crucial step toward transforming the Moon into a sustainable agricultural hub. These missions collectively demonstrate humanity's ability to innovate and adapt, ensuring the success of long-term space exploration and habitation.

#### 3.3.1. Challenge Map

The Lunar Drilling Mission map is shown below.

#### 3.3.2. Tasks

- 1. Junior rover navigates to the pre-designed **drilling sites** from the starting point.
- 2. Drilling and loose soil sample collection;
  - a. Junior rover activates its onboard drilling mechanism and begins drilling within the boundaries of the site to a **5 cm depth**, where **different colored soil** will be visible, and **collects samples** from the pile and places them in containers.
  - b. The accumulated pile of excavated lunar soil is **photographed** and saved to a SD card to be handed to the referees at the end of the mission.
  - c. Junior rover **returns** the samples to the lunar base.
- 3. Junior rover drills and collects samples and photographs from the drilling site. Additional drilling sites can be visited, earning extra points progressively based on the number of sites and samples.
- 4. The samples collected from different drilling sites **must not be contaminated** by each other. If contamination is not prevented, score deduction will be applied.
- 5. Junior rover should **return** to the base within a limited time with each sample and photographs.

| No  | Parameter                        | Detailed Explanation  | Score      |
|-----|----------------------------------|---|------------|
| 1   | Reach the drilling sites         | Junior rover navigates to the designed drilling sites   | 10/site    |
| 2.a | Sample collection and photograph | Junior rover reaches the drilling site and collects soil<br>samples from 5cm depth and stores them in a<br>container. Minimum 10 grams of soil must be<br>collected.  | 0.25/gr    |
| 2.b |                                  | Junior rover photographs the drilling site.   | 5/site     |
| 2.c |                                  | Junior rover returns the soil samples to the lunar base.  | 10/site    |
| 3   | Visit other drilling sites       | Scores gained from No 2 will be multiplied by the number of drilling sites visited.   | 1x, 2x, 3x |
| 4   | Prevent sample contamination     | Samples from different sites must not be<br>contaminated. If contamination occurs, the extra<br>points assigned per area will become invalid (No 3).<br>Scoring will be conducted solely based on No 2<br>evaluation. | -20%       |
| 5   | Complete the mission and return  | Junior rover successfully completes all assigned tasks and safely returns to the base within the allocated time.  | 40         |
| 6   | Design bonus                     | Extra points will be given to rovers designed according to the task and have performed innovative solutions to the problems faced during the mission.   | 50         |
